

Controller

1. Receives HTTP Request
2. Delegates the parameters to different SERVICES
3. Aggregates the partial responses from Services to form the COMPLETE_RESPONSE
4. Sends the HTTP Response with appropriate HTTP_STATUS

Service

1. Simple POJO which is responsible for only a reusable specific business requirement
2. Should be protocol agnostic
3. Validates the business values
4. Can connect to other Services and persistence layer
5. Sends the RESPONSE with the BUSINESS_STATUS(Success/Failure)
6. In case of Success sends the Response
7. In case of Business Validation Failure, sends the ValidationErrors

DAO/Repositories

1. DataSource Interactions
2. Repository PER DOMAIN AGGREGATE
